Certification of Engineered Flood Openings

In accordance with the Code of Federal Regulations for the National Flood Insurance Program

I hereby certify that the Crawl Space Door Systems flood vents 816CS, 1220CS, 1232CS, 1616CS, 1624CS, 1632CS, 2032CS, 2424CS, and 2436CS are designed in accordance with the requirements of the Code of Federal Regulations for the National Flood Insurance Program (NFIP) to provide automatic equalization of hydrostatic flood forces by allowing for the entry and exit of floodwaters, when properly installed and sized as set forth below. Vent opening measurements were measured and certified by Mr. Christopher Mark Loney, Virginia P.E. NO. 029000. Detailed calculations were prepared as outlined In "Review of certification of Engineered Flood Openings," prepared by Dr. Georg Reichard, Associate Professor of Building Construction, Virginia Tech (available upon request from Crawl Space Door Systems, Inc. billy@crawlspacedoors.com)

Design Characteristics

Section 2.6.2.2 of ASCE/SEI 24-05 provides an equation to determine the required <u>net area</u> of engineered openings (A_o) for a given <u>enclosed area</u> (A_o). This equation is based on the hydraulic formula for the flow rate across sharp edged orifices. I have utilized this equation to calculate 1) the restricted flow rate through the main frame opening in case the louver is blown out during a flood event; 2) the flow rate through the individual openings between louver blades; and 3) the flow rate through projected openings between louver blades following hydraulic short-tube theory. The maximum total enclosed area (A_c) that can be serviced by a single vent has then been determined by utilizing the lowest flow rate of the three assessed scenarios for each vent and is listed in Table 1.

- In absence of reliable data, the rates of rise and fall have been assumed at a minimum rate of 5 feet/hour;
- The (maximum) difference between the exterior and interior floodwater levels shall not exceed 1 foot during base flood conditions;
- A factor of safety of 5 has been assumed, which is consistent with design practices related to protection of life and property;
- The net area of openings (A_n) as provided by the manufacturer.

These values are based on the following assumptions:

This certification will be voided if the following installation requirements and limitations are not enforced:

- There shall be a minimum of two openings on different sides of each enclosed area subject to flooding;
- The bottom of all openings shall be no higher than one foot
 above the higher of the interior or exterior grade that is immediately under each opening;
- No temporary (e.g. during cold weather) or permanent solid cover may be placed into or over the flood vent that would block the automatic entry or exit of floodwaters at any time;
- Where data or analyses indicate more rapid rates of rise and fall, the required number of openings shall be increased to account
 for those different conditions. The number or size of the openings may be decreased if data or analyses indicate rates of rise
 and fall are less than 5 feet per hour.

*)	Model	H x W [in]	A _o [in ²]	A. [ft²]
	816CS	8 x 16	105	205

Identification of the building and Installed Flood Vents (By Others)

The flood vent models marked in Table 1*) are being installed at the following building: Building Address

Plastic - No Rust or Rot Crawlspace Flood Vent for Homes (New Construction & Replacement)

Easy Access • Modular Use • Can Be Painted

Flood Vent (No Cover)

One-piece ventplate with easy to insert vermin screen and fixed louver. Made of durable PVC/ABS plastic (no rust or rot) with a UV retardant treatment. FEMA compliant, engineered certified.

No cover to allow the automatic entry and exit of floodwaters. Quick and easy to install.

MODEL	HxW (in)	Net Area (in²)	Enclosed Area (ft²)
816CS	8 x 16	105	205
1220CS	12 X 20	235	500
1232CS	12 X 32	305	645
1616CS	16 × 16	180	395
1624CS	16 x 24	310	670
1632CS	16 x 32	405	835
2032CS	20 X 32	630	1240
2424CS	24 X 24	570	1230
2436CS	24×36	850	1765

- The bottom of the flood vent opening cannot be higher than 12 inches above grade.
- A minimum of two vents for each enclosed area (crawlspace, garage, or rooms within a garage),
 and each flood vent must be on at least two different sides exterior walls.
- A minimum of one engineered square inch of opening for each square foot of enclosed area for an
 engineered flood vent. Or a minimum of one square inch of net open area for each square foot
 of enclosed area for non-engineered openings.
- An engineered certificate of flood openings is required for all engineered flood vents without ICC-ES certification.

MODEL	DOOR OPENING - H x W	TOTAL DIMENSION wth APPROXIMATE 3" FRAME
816CS	8" H x16" W	ı ½"Frame 11" H x 19" W
1220CS	12" H x 20" W	17 ³ / ₄ " H x 26" W
1232CS	12" H x 32" W	17 ³ / ₄ " H x 37 1/2" W
1616CS	16" H x 16" W	21 ³ / ₄ " H x 21 3/ ₄ " W

1632CS	16" H x 32" W	21 ³ / ₄ " H x 37 1/2" W
2032CS	20" H x 32" W	25 1/2" H × 37 3/4" W
2424CS	24" H x 24" W	29 3/4" H × 30" W
2436CS	24" H × 36" W	29 ³ / ₄ " H × 41 ³ / ₄ " W

- All Flood Vents are surface mount meaning they mount over the foundation opening
- All Flood Vents are paintable with a plastic adherent paint. We suggest Krylon Spray Paint and wait an hour then use Krylon Clear Coat for a lasting finish
- The frame / flange can be trimmed if needed since our Flood Vents are made of durable ABS Plastic
- All Flood Vents come with mounting hardware, frame, screen and louver
- To remove the louver just pull the pins out of the left and right side if you need access to the crawlspace
